

SECURITY AND GAP ASSESSMENT

LEGAL INDUSTRY CASE STUDY

OBJECTIVES

- To conduct a security gap assessment to identify vulnerabilities in Law Firm's security posture
- To provide recommendations for addressing identified vulnerabilities, including implementing firewalls and intrusion detection systems
- To improve Law Firm's security posture and better protect sensitive client data from potential cyber threats

"Our mission is to help our clients navigate the complex landscape of cybersecurity and information compliance, particularly in high-regulatory environments like healthcare, finance, and Federal/DOD contracting. We understand that the stakes are high when it comes to protecting sensitive data, and we're committed to providing the expertise and support our clients need to achieve and maintain compliance."

CARL B. JOHNSON

PRESIDENT, CLEARED SYSTEMS

BACKGROUND

A 550 person law firm was concerned about the security of their sensitive client data and wanted to ensure that their systems were secure against potential cyber threats. Cleared Systems conducted a gap assessment to identify vulnerabilities in their security posture and provided recommendations for addressing them, including implementing firewalls and intrusion detection systems.

SOLUTIONS

The solution provided was to implement firewalls and intrusion detection systems to improve Law Firm's security posture and protect against potential cyber threats. This helps safeguard sensitive client data and demonstrates a commitment to data security and compliance. Cleared Systems may also provide ongoing monitoring and support for the implemented security controls.

BENEFITS

Increased Security Posture

Law Firm's is better protected against potential cyber threats as a result of the recommendations provided by Cleared Systems.

Protection of Sensitive Client Data

Law Firm's sensitive client data is better protected against potential data breaches as a result of the improved security posture.

Compliance

Law Firm's is better able to comply with relevant regulations and standards for protecting sensitive data, including those from government agencies and legal industry associations.
